

is the class diagram for Mustard Manager Pro v2.0. It includes many of the structure and core functionality classes. Some classes that are a part of the application are not shown. These include all of the view classes, essentially the pages, which are java classes but are mostly written in HTML. On that note, the sheets are also omitted. Also, this project is using stored SQL procedures to communicate between the application and the database, however none of the stored procedures are shown in this diagram.
